WINDOWSILL EDIBLE GARDEN

Materials

**consult our website for more info about seeds to use*

beans or seeds

lettuce/greens are ideal, or select *DWARF* varieties to plant
small amount of damp potting soil (not dripping wet)

paper towel, cup of water

jar lid or shallow dish with lip

recycled containers for planting

Instructions

find a work surface that can be wiped clean

fill each container with damp potting or seed starting soil
gently pat the surface but don't press the soil too hard

sow seeds according to packet instructions

roughly as deep as the seed is large

i.e. 2cm bean, planted 2cm deep

small seeds can be scattered across the surface
of the soil, then covered with a thin layer of soil

for larger seeds, make a small hole in the soil with
a pencil or skewer and gently push the seed into the hole

make sure all seeds are deep enough, and covered by soil

use a spray bottle to water thoroughly after planting

REMEMBER to label everything!

Finishing

remember to clean your work surface and tools

place the containers on a bright windowsill out of direct
full-day sun, or plants may get too hot and "bolt"

water thoroughly and evenly every day

don't let the plants dry out but don't drown them either!

as the plants grow, thin out smaller or weaker ones
